

Technical Data Sheet

Product: SPUMA Limestone

Material Description

Spuma Limestone is a premium natural stone extracted from the finest quarries in Lebanon. Known for its creamy hue and light-textured finish, it offers a sophisticated, durable solution for luxury architectural projects, both modern and traditional.

Physical and Mechanical Properties

Property	Typical Value
Density	2,750 kg/m^3
Water Absorption	< 2.5%
Compressive Strength	> 50 MPa
Flexural Strength	> 7 MPa

Quality and Tolerances

As a 100% natural stone product, variations in color tone, veining patterns, and texture are inherent. Finished material is subject to a standard production thickness tolerance of $\pm 2mm$.

Usage Guidelines

Suitable for interior and exterior cladding, flooring, and decorative structural elements. Stones Expert recommends professional sealing for exterior applications to maintain appearance.
